ZOLLER TMS Tool Management Solutions

ZOLLER Smart Cabinets – Mini PC

WZV1004-001
WZV1004-002

**The ZOLLER mini PC solution provides the option to control ZOLLER Smart Cabinets from several TMS clients. The mini PC is connected to the ZOLLER Smart Cabinets, controls the cabinets and provides feedback to the TMS clients.**

Bookings from a ZOLLER TMS client are sent to the mini PC. This implements the booking commands received, opens the Smart Cabinets and provides feedback to the individual TMS clients. After successful booking, the client PC communicates with the database and updates the stock levels and article statistics.

A Windows service that receives the requests from the end devices and controls the hardware is installed on every mini PC.

Advantages:
- Bookings from external PCs are possible via the network using TMS
- Concurrent booking by several TMS clients

Prerequisites when using ZOLLER software (WZV1004-001):
- TMS Tool Management Solutions version 1.18.4 and higher

Prerequisites when not using ZOLLER software (WZV1004-002):
- Plus customer's range of software functions

Notes:
- One mini PC can control up to 15 ZOLLER Smart Cabinets
- Overlapping cabinets or components can result in waiting times during the booking processes
